

SmartBlock™ Bracing

Bracing with **SmartBlock** forms is easy.

Always tape all adjustment cuts.

Always tape all 90 corners.

Always tape all odd corners.

Tape or protect the interlock for multi-storied construction.

Lay out bracing materials where needed.

Brace vertically about every 6-8 feet.
Maximum 10 feet between vertical bracing.

Use picture frame of door and window bucks to act as vertical bracing too.

Brace over ledger board to keep it plumb too.

If needed, make a catwalk with proper support.

Another support option.

Angle iron is simple and reusable.

Scrap and Plumbers tape work well.

Commercial systems work well too.

Commercial systems work well too.

Precut interior framing materials make clean lines.

Finish the top with a ladder brace using precuts or similar materials.

Angle iron can be ladder bracing
and protect the interlock.

Ladder bracing can also be used to create caps on the
top of the wall for brick ledges.

Remember,
always check plumb and level
before
AND
after the pour.

Ready to pour concrete.
